

BARREL BARN PROTECTIVE OIL DRUM COVER

PREVENT CONTAMINATION. PROTECT YOUR ENGINES

FAV Systems Inc. uses lubricants for many of our mobile engines and maintenance needs. Most oil drums are stored outside where the weather can eventually take its toll. Rain water, snow, insects, blowing dust and grit can easily contaminate drums to the point where they become a hazard. Dirty oil is either thrown out, or even worse, it gets used. This just leads to engine failure, damage, and money wasted.

The FAV Systems Barrel Barn addresses these concerns by quickly and easily covering your drum and oil can. The protective cover ensures water and debris are kept outside and never make it to your engine. The Barrel Barn is an economical purchase that protects your valuable investments. Stop taking chances. Keep your oil in the Barrel Barn and let your horsepower run free.

PROTECT YOUR INVESTMENTS!
