

## SIMPLE & EFFECTIVE

### SPARK UP A LITTLE FLAME ON YOUR FLARE SYSTEM HUNDREDS OF UNITS IN SERVICE / BUILT TO LAST

FAV Systems Inc. Electronic Igniters are designed for applications where fuel gas does not exist, or for conditions where gas conservation is considered to be of importance. The Electri-Lite head is totally retractable to ground level. The head assembly on the retractable unit can be moved up and down in the wind shroud to find the best ignition point where the air and fuel meet. The ignitor head insulator is mounted 4 ft. below the intense heat of the flare, so it is not subjected to high heat and cracking. The arc spacing will not change, because the protected Electrode and this long lasting design remains consistent under high heat and warping conditions caused by winds blowing the gas to one side of the flare tip.

We feel that when you consider an electronic ignitor, you should consider the durable and effective design of the FAV Systems Inc. Electri-Lite.

**12 Volt Solar or  
12/24/120 Volt  
Choice of Voltage  
and Classification**

**SATISFACTION  
GUARANTEED!!**

V-Cool Flare Tip  
(no flame lick, better combustion)

Protected Electrode  
c/w Air Intake from Below

Condensing Ring

SS Ignitor Body that is  
Retractable to Ground Level

SS Hoisting Pulley

High Voltage Coil

EZ Glide Rollers

Sturdy Tracking

Control Cable
