

BEATING THE UNBEATABLE

In FAV Systems Inc. The innovation and development of new and better technologies is a constant day to day, hence our products evolve to offer safety, efficiency and dependability to our customers at the best prices.

FAV Systems offers you the Flutter Fixer, an attachment that fits over the FAV Systems Vents to overcome the limits of strength of suspended pallet, in heavy duty conditions. This device replaces the spring with calibrated weights. It's filled with liquid and is ready to work.

With the spring system, the pressure rises the pallet, but when the pressure is released the pallet falls down, and this is repeated dozens of times in a day causing damage to the sealant on the pallet and breaking it. Here is where the Flutter Fixer comes to scene. When the pressure increases, the pallet moves upward slowly because of the weights and the liquid filled camera that acts as impact absorber and when the pressure is released slowly puts down the pallet.
