BE 
SAFE

BE 
SMART

At Fav Systems Inc., we've had extensive experience in handling sour fluids for many clients in many different applications. Our Gas-Tight Production Tanks are a unique storage tank due to the fact that they can be operated up to 14.9 PSI. What this means is that you do not have to have any type of vapor recovery system to transfer the tank vapors into the flare header. If you do have a vapor recovery system, the Gas-Tight Production Tank is much easier to maintain higher set points due to the elevated pressures that can be obtained. These systems are skidded with an easy to read level gauge and can be custom built to your requirements. The standard volume is 480 BBL's.

USE THE FAV SYSTEMS GAS-TIGHT PRODUCTION TANK

OPTIONS

- Add or delete connections
- High level shut downs
- Burner assemblies to heat fluids
- Internal coatings
- Added volume
- Companion tanks
- Auto purge valves
- FAV Systems pressure vacuum vents
- Fully insulated

SPECIALIZED IN PREVENTING FUGITIVE EMISSIONS
