

YOUR KIMRAY WILL LAST... WE'LL SEE TO IT!

Fav Systems Inc. We enjoy challenges and developing solutions. FAV Systems uses Kimray components in many of our products, and we find they work well when new. Once they are in service for a period of time, however, corrosion affects their performance. Fav Systems decided to find a solution, so we began studying Kimray failures and their causes. We developed several improvements that ensure a longer life and better working product.

Fav Systems Kimray Conversion Package makes for a more dependable and long lasting product. Our modifications create units that are far more suitable for sour applications, which reduces your maintenance requirements.

Combine the Fav Systems upgrades and you'll see how we make Kimrays work better and last longer.

Call us today about modifying old or new Kimray Back Pressure Valves.
