

**ONE PIECE BODY**  
And GORE-TEX® Sealant

## THE KEYS TO SUPERIOR SEALING

### ONE-PIECE BODY

FAV Systems Inc. uses an extremely rugged one-piece weld body design. All of the holes in the vent body are cut using a laser cutter. The body is covered with an epoxy based coating that offers chemical resistance with a durable finish. The one-piece body design offers great flexibility when it comes to custom configured vents. Other manufacturer's use cast bodies, (which makes producing a custom vent very expensive). The one-piece body also offers superior sealing factors. Vents which use a two piece body only provides the vent with another place to leak. FAV Systems vents are also very rigid because of the weld body design.

### GORE-TEX® SEALANT

FAV Systems Inc. incorporates the use of GORE-TEX® Joint Sealant to seal all of the crucial joints in and on the vent. This gasket material is extremely tough and has a high chemical resistance. By using this incredible sealer we have eliminated all of the potential leak zones.

**FAV SYSTEMS INC. USES  
ONLY THE FINEST  
COMPONENTS**

SPECIALIZED IN PREVENTING FUGITIVE EMISSIONS
