

# PRESSURE VESSELS A-STAMP CERTIFIED

## WE CAN HANDLE THE PRESSURE

### PRESSURE VESSELS

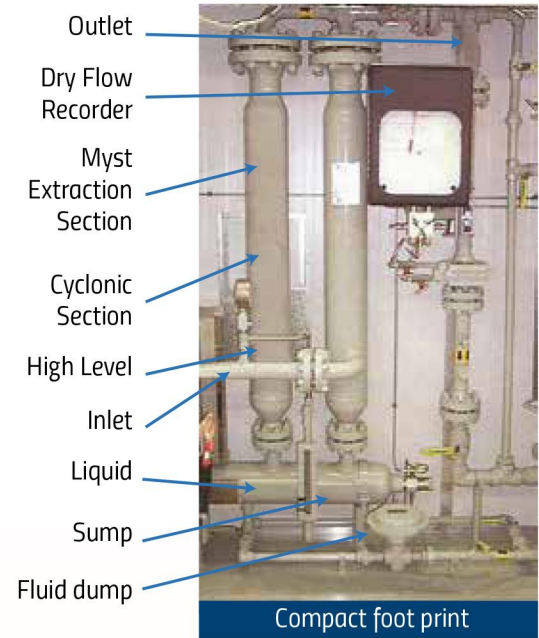

FAV Systems Inc. is an A-Stamp approved manufacturer of many types of pressure vessels. We can either custom design vessels to suit customer's needs, or build from existing drawings. FAV Systems has several standard packages to suit many oilfield applications. Unique sizes and configurations are always available.

### PRESSURE FITTINGS

FAV Systems is proud to offer a range of products traditionally associated as pressure vessels, but now available as approved pressure fittings (ie, smaller separators, chemical displacers, etc.) Units carry CRN numbers, but because of their lower capacity, do not need to be A-Stamped. This saves money by eliminating the need for radiography tests and ABSA inspections. FAV Systems pressure fittings are recognized and approved due to our strict Quality Control program. FAV Systems procedures are accurately recorded and follow a strict protocol to ensure each fitting is built to operate as a pressure vessel would. Then we pass the cost savings directly to our customers.

- \*2 and 3-Phase gravity separators
- \*Cyclonic-style separators
- \*Production and swab tanks
- \*High pressure knockout drums
- \*Fuel gas scrubbers
- \*Methanol tanks... and more!
